***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 20, 22, 24, 66-75, 80-82 drawn to aspartoacylase and pharmaceutical compositions containing the enzyme, classified in class 424, subclass 94.6.
- II. Claims 76-79, drawn to antibodies and hybridomas, classified in class 435, subclass 331.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. The inventions of each Group are independent, mutually exclusive and patentably distinct products. Each can be independently synthesized by chemical means. An antibody is encoded by an entirely different DNA than that the enzyme which is bound by it, and the primary sequence of the antibody bears no relationship to the sequence of the detected enzyme. It would place undue burden on the examiner to examine several independent inventions in one application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and the search for one Group is not required for any other Group, restriction for examination purposes as indicated is proper.
